

Sentra Artificial Intelligence

Brand Standards & Identity Guidelines

Version 1.0 | 15 August 2026 | Normative unless marked REVIEW

CORE IDENTITY

Calm intelligence.
Precise systems.
Progress without noise.

Master mark / Geist / #0D1117 / #5B8CFF

How to use this manual

One source of truth for brand identity, production, governance, and handoff.

Decision	Status	Current rule
Master logomark geometry	APPROVED	Use supplied SVG master; never redraw or regenerate.
Corporate name	APPROVED	Sentra Artificial Intelligence
Primary typeface	APPROVED	Geist Sans; Geist Mono for technical/data contexts
Core dark	APPROVED	#0D1117
Accent	APPROVED	#5B8CFF Sentra Intelligence Blue
Primary full lockup spacing	REVIEW	Use production v1; typography geometry requires final visual sign-off
Verbal identity	REVIEW	Recommended principles in this manual; no official tagline established

Rule of precedence: APPROVED project decisions and the supplied master assets override examples. Sections marked REVIEW are directional and must not be treated as final without brand-owner sign-off.

Contents

The manual is organized from immutable identity rules to platform use and governance.

Brand at a glance

The shortest possible definition of the approved Sentra visual identity.

01

FORMAL NAME

Sentra Artificial Intelligence

SECONDARY SHORT NAME

Sentra AI - constrained contexts only

MASTER SYMBOL

Approved abstract Sentra logomark

PRIMARY TYPEFACE

Geist Sans

TECHNICAL TYPEFACE

Geist Mono

OFFICIAL DARK

#0D1117

PRIMARY ACCENT

#5B8CFF

CORE MARK COLORS

Black #000000 / White #FFFFFF

IDENTITY PRINCIPLE

Black/white builds identity. Blue signals intelligence, interaction, and emphasis.

Brand expression principles

Translate the brand character into repeatable creative decisions.

● **Intelligent**

Make complexity understandable. Prefer structure, evidence, and clarity over visual tricks.

● **Calm**

Use space, disciplined contrast, restrained motion, and measured typography. Avoid visual anxiety.

● **Trustworthy**

Prioritize legibility, consistency, transparent hierarchy, and realistic claims.

● **Progressive**

Feel current and computational without depending on short-lived AI aesthetics.

● **Efficient**

Every element should have a job. Remove decoration that does not improve recognition or comprehension.

● **Strong, not aggressive**

Use decisive geometry and high contrast without oversized shouting, harsh effects, or militaristic styling.

● **Simple, meaningful**

One memorable symbol and a small number of strong rules are preferred to many decorative motifs.

Naming and brand architecture

Keep the master brand dominant until a real product or sub-brand needs distinct identity.

MASTER BRAND

Sentra Artificial Intelligence

Primary corporate identity - default for external formal use.

COMPACT NAME

Sentra AI

Use only where space materially constrains the full name.

PRODUCT / SUB-BRAND

[Name] by Sentra

Create only after strategic approval and clear audience need.

Descriptive feature name

No official tagline is established in v1.0. Do not invent taglines, product descriptors, or endorsement phrases and present them as official brand language without approval.

Master logomark

The approved symbol is immutable. Every logo asset is derived from this geometry.

Sentra Artificial Intelligence - Master Logo Review

Approved geometry shown in black/white; typography assets use Geist in source SVG.

Source-of-truth rules

- Use sentra-logomark-master-black.svg or the corresponding white/currentColor master.
- Never regenerate the mark with an image model, trace a low-resolution PNG, or redraw it manually.
- Do not alter the diagonal angle, band weight, spacing, curve radius, or terminal treatment.
- The mark remains one color by default: black on light surfaces, white on dark surfaces.
- Accent blue belongs to interaction and emphasis, not the default master mark.

Responsive logo architecture

Use the smallest necessary set of variants. Each one must solve a specific space constraint.

PRIMARY	Primary corporate lockup [mark] Sentra Artificial Intelligence Website masthead, proposals, partnerships, formal corporate use
SECONDARY	Secondary compact lockup [mark] Sentra AI Constrained UI, small header, compact digital placements
PRIMARY	Icon-only Approved master mark Favicon, app icon, social avatar, UI emblem
CONDITIONAL	Stacked lockup Mark above name Square / narrow compositions only
	Wordmark-only Rare cases where symbol is unavailable or composition demands text-only

REVIEW: the full and compact text lockups are production v1 assets, but exact typographic spacing remains subject to final brand-owner sign-off. The master symbol itself is approved.

Construction and geometry

Geometric precision is a production control, not a decorative story.

What must remain fixed

- Consistent diagonal axis across all straight elements.
- Uniform visual band weight throughout the symbol.
- Smooth Bézier-like right-hand curve with no abrupt radius changes.
- Controlled diagonal terminals with consistent optical treatment.
- Negative-space relationships must be preserved at every scale.
- Optical balance takes precedence over naive mathematical centering.

Construction files are for verification and education. Production teams should use the supplied master paths rather than recreating geometry from the grid.

Clear space

Protect recognition by keeping visual noise away from the mark.

Minimum clear space = 1X on all sides X

Minimum rule

Maintain at least 1X clear space on every side of the logomark, where X equals the approximate width of one diagonal band. More space is preferred whenever layout allows.

Do not place inside clear space:

- Text, labels, partner logos, borders, crop lines, UI controls, photos with high visual contrast.

Minimum size and small-scale behavior

Use the icon-only mark before forcing long lockups into small spaces.

Small-size test

Baseline minimums

Asset	Digital	Print
Icon-only	16 px	6 mm
Primary corporate lockup	180 px	30 mm
Small UI recommendation	24-32 px preferred	N/A

At 16 px, test the exported favicon itself - not a scaled screenshot. Do not artificially thin or simplify the logo unless a separately approved micro-mark is created.

Logo color applications

The symbol is monochrome. Background choice determines whether black or white is used.

BLACK MARK ON LIGHT

Default for white and sufficiently light neutral surfaces.

WHITE MARK ON DARK

Default for Sentra Dark #0D1117 and sufficiently dark surfaces.

ACCENT ≠ DEFAULT LOGO

Incorrect usage

Consistency matters more than novelty. Do not modify the approved mark to fit a layout.

Stretch

Rotate

Recolor

Shadow / effects

- No stretch, skew, perspective distortion, or non-uniform scaling.
- No rotation of the approved mark as a decorative gesture.
- No default blue, multicolor, gradient, glow, shadow, outline, bevel, texture, or 3D treatment.
- No clipping the symbol unless a separate composition has been explicitly approved.

Core color system

A restrained neutral system creates identity; blue is functional emphasis.

Sentra Dark

White

Black

Intelligence Blue

Blue 600

Role	Token	Rule
Dark canvas	#0D1117	Primary branded background
Elevated surface	#121821 / #18212C	Cards, panels, hierarchy - not focus rings
Border	#263241	Subtle separation only; not enough as sole critical control boundary
Primary text on dark	#F5F7FA	Long-form and UI text
Secondary text on dark	#A8B3C2	Supporting copy
Muted text on dark	#8B96A5	Metadata; still passes normal text contrast on #0D1117
Focus / interaction	#5B8CFF	Dark surfaces
Link / interaction on white	#315FD6	Normal-sized text on light surfaces

Accessibility and contrast

Brand expression must remain readable, operable, and distinguishable.

Foreground	Background	Ratio	Use
#F5F7FA	#0D1117	17.63:1	AAA-level normal text contrast
#A8B3C2	#0D1117	8.91:1	Secondary text
#8B96A5	#0D1117	6.31:1	Muted text
#5B8CFF	#0D1117	5.98:1	Accent text / controls on dark
#315FD6	#FFFFFF	5.62:1	Accent text / links on white
#263241	#0D1117	1.46:1	Decorative border only - not sufficient alone for critical UI boundary

Operational rules

- Normal text should meet 4.5:1 minimum contrast; large text may use 3:1.
- Essential icons, focus indicators, and UI component boundaries should achieve 3:1 where required.
- Do not rely on color alone to communicate error, state, selection, link, or category.
- Use labels, underlines, shape, position, iconography, or line style as redundant cues.
- Validate real component states, not only isolated hex pairs.

Accessibility reference baseline: WCAG 2.2 AA. Re-check requirements for regulated or safety-critical contexts.

Typography system

Geist is the approved family. It should feel precise, legible, neutral, and modern.

Typography hierarchy

Intelligence, clarity, progress.

Display / Hero - Geist Sans 600

Clinical intelligence infrastructure

H1 - Geist Sans 600

Build systems that make complex intelligence easier to understand, trust, and use.

Body - Geist Sans 400

`trajectory_model.status = "active"`

Technical / data - Geist Mono 400-500

Note: this guideline PDF uses a system sans fallback for rendering; production typography is Geist.

Approved roles

Role	Typeface	Weight
Display / Hero	Geist Sans	500-600
Heading	Geist Sans	500-600
Body	Geist Sans	400
UI label / button	Geist Sans	500-600
Code / model / data	Geist Mono	400-500
Wordmark source	Geist Sans	600 + optical tuning

Do not substitute decorative “futuristic” fonts into corporate materials. If Geist is technically unavailable, use a neutral sans fallback only as a temporary implementation fallback - never as the approved wordmark.

Type hierarchy and rhythm

Hierarchy should come from scale, weight, spacing, and content - not from excessive font variety.

Token	Suggested size	Line-height	Weight	Use
Display	48-72 px	0.95-1.05	600	Hero / key statement
H1	40-56 px	1.05-1.15	600	Page title
H2	28-36 px	1.1-1.2	550-600	Major section
H3	20-24 px	1.2-1.3	550-600	Subsection
Body L	18-20 px	1.45-1.6	400	Lead paragraphs
Body	15-18 px	1.45-1.65	400	Default prose / UI
Small	12-14 px	1.4-1.6	400-500	Metadata / captions
Mono	12-16 px	1.4-1.6	400-500	Code / technical values

Tracking and casing

- Keep body tracking neutral.
- Tighten large display headlines only when visually necessary.
- Avoid excessive ALL CAPS for long copy.
- Technical identifiers may use Geist Mono; do not use mono as decorative body text.

Wordmark rule

The corporate wordmark is not a generic typed label. Preserve the approved lockup source and its optical spacing. Do not recreate it ad hoc in office software, Canva, or CSS text when an official lockup asset exists.

Layout, grid, and spacing

Structure should feel computational and precise without becoming visually mechanical.

Composition rules

- Use a 4 px base grid with an 8 px primary spacing rhythm for digital work.
- Align typography, imagery, and controls to common edges; avoid random centering.
- Prefer generous negative space over adding decorative separators.
- Use accent blue as a focal signal, not as a background fill for every section.
- Thin grid lines may be used as an optional digital motif at low contrast; they must never compete with the logo or content.

Iconography

Icons should behave like system components, not miniature illustrations.

Geometry

Simple geometric construction, consistent optical size, shared corner language.

Stroke

Choose one family per product surface; do not mix thin outline, filled, and hand-drawn styles arbitrarily.

Grid

Design on 24 px or 32 px canonical grids; test at actual UI sizes.

Color

Default neutral. Blue only for interactive/selected/emphasized states.

Meaning

Use familiar metaphors where possible. Clarity beats novelty.

Accessibility

Critical icons need text labels, tooltips, or redundant state cues when meaning is not obvious.

Avoid using AI clichés as icons or visual identity devices: brains, robots, neural networks, generic circuit boards, glowing chips, or synthetic “tech” symbols merely to signal AI.

Imagery and illustration

Technology should be shown through outcomes, systems, and human capability - not science-fiction clichés.

PREFERRED

- Real product interfaces and credible system visualizations.
- Human environments when people materially explain the use case.
- Abstract geometry rooted in the Sentra mark, grids, trajectories, flows, or data.
- High information density only when hierarchy remains clear.

AVOID

- Robots staring at holograms.
- Glowing brains, neurons, circuit-board heads, generic AI chips.
- Excessive neon cyberpunk palettes.
- Stock imagery that implies clinical or technical certainty it cannot support.

Optional supporting motif: precise low-contrast grids and trajectories.

Use sparingly. Supporting motifs must never become more recognizable than the master logomark.

Data visualization and AI outputs

Data is a core part of the brand experience. Visualizations must optimize comprehension before decoration.

Data visualization: calm, legible, role-based color

Use accent blue for focus; rely on labels, shapes, line styles, and contrast - not color alone.

Visualization rules

- Use blue 500 as the primary focus series on dark surfaces; use blue 600 or darker on white for text/line contrast.
- Differentiate series with labels, shapes, line patterns, or direct annotation - not color alone.
- Keep grid lines and axes quieter than the data.
- Use semantic colors (success, warning, error) only when they represent actual semantics; they are not decorative accents.
- For model uncertainty, communicate ranges, confidence, or missingness explicitly rather than implying false precision.

Digital product UI

The brand should feel native to software: quiet surfaces, strong hierarchy, explicit focus states.

Interaction principles

- Dark is an official branded surface, not a mandate that every product be dark-only.
- Focus indicators must be obvious; do not rely on subtle borders that fail non-text contrast.
- Use blue to signal interaction, selection, current context, progress, and information priority.
- Avoid blue saturation everywhere; neutral surfaces create room for focus.
- Animations should explain state change, orientation, or causality - not simply make the UI feel “AI”.

Trajectory status

Updated 12 seconds ago

ACTIVE

0.82 confidence

Website system

Use the brand to create recognition without turning every page into a logo poster.

Website priority

- Primary corporate lockup in the desktop masthead where space permits; compact/icon form on constrained mobile surfaces.
- Use SVG for interface logos. Raster exports are fallback assets, not master sources.
- Open Graph/social previews should be generated from a controlled layout system and current brand tokens.
- Keep hero backgrounds restrained so product value and content remain primary.
- Maintain clear space around the logo even inside navigation bars.

Primary implementation assets

03-WEBSITE/sentra-web-navbar-black.svg
03-WEBSITE/sentra-web-navbar-white.svg
03-WEBSITE/sentra-og-image-default-1200x630.png

Favicon and app icon system

Small-size assets are exports of the master mark, not opportunities for a different logo.

Rules

- Test actual 16 px and 32 px raster output at 100% scale.
- Use appropriate padding in app-icon containers; do not crop the symbol tightly.
- Use maskable/adaptive assets only from the approved exports.
- Do not add a rounded-square container to the master logomark itself; the operating system/app asset may provide the container.
- Keep light and dark variants visually equivalent.

Social media system

Consistency comes from a shared identity system, not identical artwork on every platform.

LinkedIn

X

GitHub

YouTube

Platform rules

- Use the icon-only mark for avatars unless the platform reliably supports the full lockup at small size.
- Keep critical text and the logo inside each platform's current safe area.
- Re-check platform export specifications before each major release because requirements can change.
- Do not force the logo into every post; template consistency can come from type, color, spacing, and data-visual language.
- Prioritize original product/system evidence over generic AI stock imagery.

Presentations and documents

Business collateral should feel as disciplined as the product interface.

Production rules

- Use vector logos in PDF/export workflows whenever possible.
- Never copy a logo out of a screenshot or browser preview.
- For print, proof black/white reproduction and small-size legibility on the actual substrate.
- CMYK conversions must use the printer/publisher ICC profile; generic RGB-to-CMYK values are not authoritative.

Co-branding and partner use

Protect equality, clear separation, and truthful relationship signaling.

Sentra Artificial Intelligence

PARTNER LOGO

Rules

- Use a visible separator or sufficient spatial separation between marks.
- Balance optical weight rather than forcing identical pixel dimensions.
- Do not alter either organization's logo to make them match stylistically.
- Use "Powered by Sentra" or similar endorsement language only when the relationship and wording are explicitly approved.
- Partners receive curated co-brand assets and usage rules - not the complete source repository.

Sub-brands and feature architecture

Extend the system only when naming creates real value for users, markets, or governance.

Is it a distinct audience or product promise?

NO → Keep under master brand

YES → **continue**

Does it need independent recognition over time?

NO → Use descriptive feature name

YES → **propose sub-brand**

Can the master brand remain visible?

YES → Prefer “[Name] by Sentra”

NO → **Requires brand architecture review**

Do not create separate logos for every feature. A proliferation of marks weakens recognition, increases maintenance, and creates unnecessary governance cost.

Verbal identity - recommended, pending approval

REVIEW

This is a proposed communication standard derived from the approved visual personality. No official tagline exists.

Clear over clever

Use direct language and explain complex ideas without showing off.

Calm over hype

Avoid breathless claims, fear, and artificial urgency.

Specific over vague

Prefer measurable capabilities, constraints, and evidence.

Confident, not absolute

State what the system does; acknowledge uncertainty where it matters.

Human, not robotic

Write naturally. Do not imitate generic “AI voice” or corporate filler.

Useful over promotional

Every sentence should help the reader understand, decide, or act.

Avoid unsupported superlatives: “revolutionary”, “perfect”, “human-level”, “guaranteed”, “magical”, or “fully autonomous” unless the claim is specifically substantiated and appropriate for the context.

Asset governance and naming

Brand consistency depends on how files are governed as much as how they look.

- SENTRA - BRANDING/
 - | 00 - BRAND - STRATEGY/
 - | 01 - LOGO - MASTER/
 - | 02 - LOGO - VARIATIONS/
 - | 03 - WEBSITE/
 - | 04 - FAVICON - BROWSER/

 - | 11 - PREVIEW - AND - MOCKUPS/
 - | 12 - ARCHIVE/

File naming

[brand] - [asset] - [variant] - [color] - [size] . [format]

Example: sentra - logo - horizontal - full - black . svg

Asset status

Status	Meaning
DISCOVERY	Information is still being defined
DIRECTION	Direction chosen; not yet an approved production master
CONCEPT	Asset concept under development
REVIEW	Awaiting explicit evaluation/sign-off
APPROVED	Brand owner approved
PRODUCTION	Approved direction being exported/implemented
READY FOR HANDOFF	Verified and packaged for downstream teams
ARCHIVED	No longer active; retained for history

Handoff and final approval

A brand asset is not “done” until the correct team can use it without reconstructing it.

DESIGNER / BRAND

- ☐ Master SVG paths verified
- ☐ Black / white variants
- ☐ Clear space + minimum size
- ☐ Typography and color tokens
- ☐ Preview and misuse examples

DEVELOPER

- ☐ SVG viewBox correct
- ☐ currentColor asset available
- ☐ Favicon / app exports
- ☐ CSS/JSON design tokens
- ☐ No raster embedded in SVG
- ☐ No manual CSS redraw of logo

MARKETING / PARTNER

- ☐ Curated SVG/PNG package
- ☐ Social / presentation templates
- ☐ Do/don't summary
- ☐ Co-brand rules where relevant
- ☐ No access to obsolete variants

Final approval gate: verify geometry, small-size legibility, light/dark contrast, naming, platform crop/safe-area behavior, and source-of-truth references. Move superseded files to ARCHIVE rather than deleting the decision trail.

Quick reference, tokens, and sources

Keep this page with implementation teams as a compact operational summary.

Core tokens

Token	Value
sentra-dark	#0D1117
sentra-white	#FFFFFF
sentra-black	#000000
sentra-blue-500	#5B8CFF
sentra-blue-600	#315FD6
sentra-text-primary	#F5F7FA
sentra-text-secondary	#A8B3C2
sentra-text-muted	#8B96A5

Immutable rules

- Use the approved master SVG.
- Black or white mark by default.
- Primary full name: Sentra Artificial Intelligence.
- Geist Sans / Geist Mono.
- No AI clichés, effects, or regenerated logo variants.
- Sections marked REVIEW require explicit approval.

External references

- Vercel - Geist Font / Geist Design System

Change log

Version	Date	Summary
1.0	2026-08-15	Consolidated approved identity, visual system, accessibility rules, digital applications, governance and handoff.

Project source precedence: project instructions → approved project knowledge/assets → current conversation → clearly labeled recommendation.
